cial.

The price of the silver
would be calculated
by taking the London
market price as a
basis - but in general
the same would entirely
depend on the conditions
the Jap. Government
would offer.

It would be desired
that the Jap. Govern-
ment would bring
forward its views
as regards - the high-
of percentage, the
time within which
the capital would be

paid back -
could be done in
yearly instalments
as for instance 3%
per year - in pap.
products (Rice, corn
etc): which would be
taken over at the
market rate or sold
for $\frac{1}{2}$ of the pap.
government.

The capital would thus
be repaid in about
20 years.

As I have already
said - the it is the
wish to know in a

perfect confidential
way - the proposal
of the Lap. Government,
according to which
only it can be
possible to fix
the rates of interest
etc. etc.
