Before using the plaster the same has
to be put in water in order that the
musline goes off. Then it has to be applied
(by rubbing it on with the hand) on the
paining part. It has to be kept in
this position by tying it up. The
time as to ~~when~~ how long it has
to be kept depends from the pains
suffered and in case that the
pain should return the plaster has
to be put on again. Also as to how
large a part of the plaster has to
be put on depends from the size
of the paining part.
